Unit 2 - Making Predictions

VISUAL AID: "Making Predictions"

Part I: The Hypothesis—You will soon conduct an experiment to find out which materials will allow magnetic fields to pass through them. Before you begin, check off the hypothesis you think is most accurate:

Hypothesis #1	Magnetic fields can pass through all materials
Hypothesis #2	Magnetic fields can pass through some material
Hypothesis #3	Magnetic fields can pass through some materials and not others.
Part II: The Control D	ata—How many paper clips does the magnet pick up with out any
naterial between it and the	

Part III: The Experiment:

Data Table

Hypothesis	Test #1	Test #2	Average
I think magnetic field will pass through. It			
will pick up a lot of paper clips	8	6	$(8+6) \div 2 = 7$
	I think magnetic field will pass through. It	I think magnetic field will pass through. It	I think magnetic field will pass through. It
